SUBJECT: Auxiliary Mooring Cell Construction, Chickamauga Lock TRM 470.7

The Nashville District Corps of Engineers Plant Unit is scheduled to begin construction of an auxiliary, additional mooring cell located downstream of the railroad bridge and lock at approximately TRM 470.7. This new mooring cell will be constructed 150 feet on-center, upstream from the existing upstream mooring cell in this location. This construction is necessary to facilitate mooring activities that will result from future construction of the C J Mahan Company as work on the cofferdam and other associated structures progresses immediately downstream of the lock. The construction of this additional mooring cell is scheduled to take approximately 5-7 weeks with work commencing on 19 February 2008. During working hours, the plant unit can be contacted on Marine Channel 13. Further instructions and/or mooring requirements may be issued upon arrival in this location as conditions warrant.

Additional comments or questions may be directed to the Lockmaster, Mr. Matt Emmons @ (423) 875-6230. Mariners are requested to transit this area with caution at all times.

FOR THE DISTRICT ENGINEER:

JEFFREY D. ROSS
Chief, Navigation Branch
Operations Division
